

Escola Tècnica Superior  
d'Enginyeria Química

**FINAL MASTER PROJECT**  
**MASTER IN ENVIROMENTAL ENGINEERING**  
**AND SUSTAINABLE ENERGY**

**Assessing the Environmental Challenges**  
**of Hydrogen Supply Chains**

**Course 2023-2024**

By Student: Jesmyl Elisa Cordova Cordova

Company Supervisor and URV Tutor: Carlos Pozo Fernández

## **INDEX**

1. Introduction.....	1
2. Objectives.....	3
3. Methodology overview.....	4
3.1. Earth System.....	6
3.1.1. Planetary Boundaries.....	7
3.1.2. Safe Operating Space.....	11
3.2. Life cycle assessment.....	12
3.2.1. Goal and scope definition.....	12
3.2.2. Life Cycle Inventory.....	13
3.2.3. Life Cycle Impact Assessment.....	13
3.2.4. Interpretation of results.....	13
3.3. Application of the PB-LCIA.....	14
3.3.1. Adapting the Planetary Boundary framework.....	14
3.3.2. Expression of hydrogen impacts.....	16
4. Current hydrogen supply chain.....	18
5. Production alternatives.....	19
5.1. Steam Reforming.....	19
5.2. Partial Oxidation.....	20
5.3. Autothermal Reforming.....	20
5.4. Gasification.....	20
5.5. Water Electrolysis.....	21
5.6. Aluminium Combustion.....	22
5.7. Iron-based Chemical Looping.....	23
5.8. Dark Fermentation.....	24
5.9. Carbon Capture Storage.....	24
6. Transportation alternatives.....	25

## Assessing the Environmental Challenges of Hydrogen Supply Chains

---

6.1. Gas.....	25
6.2. Liquid.....	26
6.3. Liquid Organic Hydrogen Carriers.....	26
6.3.1. Dibenzyl toluene and Methylcyclohexane.....	27
6.3.2. Ammonia.....	28
6.3.3. Methanol.....	28
6.3.4. Synthetic methane.....	29
7. Modelling Assumptions.....	30
7.1. Production alternatives.....	30
7.2. Transportation alternatives.....	30
7.3. Regionality of the alternatives.....	32
8. Results and Discussions.....	33
8.1. Current landscape.....	33
8.1.1. Hydrogen supply chain.....	33
8.1.2. Electricity mixes in different regions.....	36
8.2. Production contribution.....	39
8.2.1. Global analysis.....	39
8.2.2. Regional implications.....	45
8.3. Transport contribution.....	51
8.3.1. Global analysis.....	51
8.3.2. Regional implications.....	53
8.4. Impact breakdown.....	53
8.4.1. Drivers of impacts from production alternatives.....	54
8.4.2. Drivers of impacts from transport alternatives.....	67
8.4.3. Drivers of impacts of the complete hydrogen supply chain.....	69
8.5. Planetary boundary footprint and cost assessment.....	71
9. Conclusions.....	76

10. References.....	78
11. Appendices.....	86
11.1. Exchanges for modelling activities.....	86
11.1.1. Production alternatives.....	86
11.1.2. Transportation alternatives.....	100
11.1.3. Transportation means.....	105
11.2. Results and discussion.....	109
11.2.1. Current landscape.....	109
11.2.2. Production contribution.....	109
11.2.3. Transport contribution.....	112
11.2.4. Impact breakdown.....	113
11.2.5. Planetary boundary footprint and cost assessment.....	129
11.3. Breakeven distances for hydrogen transport.....	135
11.4. References.....	137
